SUMMARY

Economics graduate with a Data Science minor and hands-on experience in econometric modeling, financial data analytics, and quantitative risk frameworks. Background combines rigorous statistical training with the discipline and competitiveness developed as an NCAA student-athlete. Seeking analyst roles across finance.

EDUCATION

Lawrence University — Appleton, WI

June 2026

B.A. in Economics, Minor in Data Science | GPA: 3.4/4.0

- Relevant coursework: Advanced Data Computing, Advanced Econometrics and Modelling, Data-Scientific Programming, Money and Banking, Quantitative Decision Making, Statistical Machine Learning

EXPERIENCE

Penta Group — London, UK

March 2025 – June 2025

Data Analyst Intern

- Leveraged generative AI tools, LLMs, and Google Sheets to streamline and execute complex data scraping tasks.
- Conducted targeted research and analysis to deliver tailored insights, consistently meeting specific client requirements.
- Contributed to the successful delivery of 9 projects, collaborating with cross-functional teams to meet strict deadlines.
- Executed rigorous quality-control protocols, manually auditing 14,390 unique data entries to ensure high data integrity.
- Engineered and tested prompt frameworks for back-end sentiment analysis, optimising model performance.

PROJECTS

Micro-Cap Quantitative Risk & Predictive Modelling

June 2026 – Present

- Engineered a comprehensive financial analytics pipeline in R utilising tidyquant and REST APIs to ingest, clean, and manipulate over 19 years of daily trading data for micro-cap securities.
- Constructing an ordinal logistic regression risk framework, designing a custom 3-tiered severity matrix that maps market volume multipliers and asset price drops to quantify high-volatility risk events.
- Addressing quarterly-to-monthly financial data sparsity biases by evaluating temporal disaggregation techniques (Chow-Lin and Denton-Cholette) to preserve historical asset volatility across disparate timeframes.
- Mitigating algorithmic trend bias by engineering relative percent-change metrics over raw dollar inputs, optimising feature sets for lack of trend-awareness in Random Forest and XGBoost models.
- Evaluated sentiment data viability via NewsAPI and Finnhub script pipelines, ultimately pivoting to empirical technical indicators (MACD, RSI, OBV) to isolate quantitative analysis from PR source biases.

Economics Senior Research Project — Recreational Marijuana Legalisation & Employment

- Designed a Difference-in-Differences model with state and year fixed effects to analyse the impact of recreational marijuana legalisation on state-level employment in the USA.
- Cleaned and processed a dataset of over 300,000 observations across 25 economic, demographic, and geographic variables spanning 2000–2022 using RStudio.
- Utilised advanced econometric techniques, including propensity score matching, event study graphs, and regression tables to control for state GDP, population, and regional variables.
- Presented analytical findings in both executive presentation and comprehensive research paper formats (Grade Received: A).

SKILLS

Proficient in: Data Analysis, R, Microsoft Office Products, Google Workspace Products, Spanish

Experience with: Python, SQL, Financial Modelling, Java, STATA, Excel VBA, PowerBI

EXTRACURRICULAR

NCAA Fencing — Lawrence University

November 2019 – Present

- 2024 Men's Team Most Improved Award recipient.

Boy Scouts of America

July 2016 – January 2022

- Achieved the rank of Life Scout; progressed through leadership roles as Assistant Patrol Leader (2017–2018), Patrol Leader (2018–2019), Assistant Senior Patrol Leader (2019–2020), and Senior Patrol Leader (2020–2022).
- Completed 300 hours of community service across the Dobbs Ferry, Hartsdale, and Ardsley neighbourhoods.
